

Tradition + Technology

When it comes to granite products for your kitchen, bath, and other special spaces in your home or at your workplace, Arkansas Granite & More has a long and distinguished tradition of offering only the best to completely satisfied customers throughout Central Arkansas and beyond. We are uniquely qualified to do the complete job in-house, from templating and measuring to fabrication, installation, sealing, and maintenance. A compelling advantage we offer you is guidance based upon experience. Our president and founder has over 35 years in the industry. You're invited to visit YOUR delightful showroom and meet OUR family!

Thanks to the unique technology we have introduced, you can see exactly how your granite countertops will look **BEFORE** any cutting begins.

FUSION files are created using CAD and slab photos. A real-time layout is generated before the slab is loaded onto the machine to be precision cut. All guesswork is eliminated by using this one-of-a-kind AGM system. (An actual print-out is shown here.)
